

Technical Update

November 3, 2024

Test Report Change Notification

Previously we announced approval of the **Mvista® Blastomyces Antigen EIA** by the NY State Department of Health. Through this process reviewers asked that we include the statement below about possible cross reaction with other known pathogens on our reports.

When tested in cultures of 10^5 – 10^6 organisms/mL, cross-reactions occurred with *Histoplasma spp.*, *Coccidioides spp.*, *Paracoccidioides brasiliensis*, *Talaromyces marneffeii*, *Aspergillus nidulans*, and *Candida tropicalis*.

Beginning **Monday, February 10, 2025**, the statement above will be added to our report format for test code **316, Blastomyces Antigen EIA**.
